

ALPHA LIFT TILT IN SPACE

Lift Mechanism

2-Motor Version

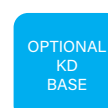

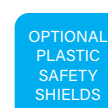

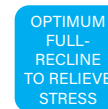

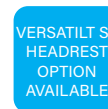

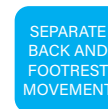

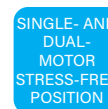

1-Motor Adapter

All the features you expect in a Tilt in Space Lift Mechanism plus MORE.

The Alpha Lift Tilt In Space Mechanism provides an ergonomically designed, stress-free position to reduce pressure on the neck, back, and legs. A raised footrest that is 2.37" (6.04 cm) above the standard lift in full-recline position – offering 5° greater seat pitch – enhances comfort for an improved sense of relaxation. With the power-only activation, users can stop the recline at their ideal position. The Alpha Lift Tilt In Space mechanism can also be combined with motorized headrest and lumbar options to offer superior support and relief when reading or watching TV. An optional knock-down base design supports improved shipping efficiency. An optional safety shield is available to help reduce user interaction with moving parts and support safer operation.
